

MODULE 7

Testing and Validation

MedTrack Healthcare Dashboard

Project	MedTrack Healthcare Dashboard
Module	Module 7 – Testing and Validation
Purpose	Final quality assurance and dashboard validation
Overall Result	PASSED

FINAL STATUS

Module 7 completed successfully

This report documents the final testing carried out on the MedTrack dashboard. The main purpose was to make sure that the KPIs, healthcare metrics, filters and interactive dashboards were working as intended before submission.

1. Testing Objective

Module 7 focused on checking the finished dashboard from a user and quality-assurance perspective. The testing covered the calculations shown on the dashboard, the main healthcare metrics, filter behaviour, chart interactions, Patient Flow analysis and Resource Utilization analysis.

2. Module 7 Requirements

Requirement	Validation Status
Validate KPI calculations	PASS
Verify healthcare metrics	PASS
Test dashboard interactions	PASS
Validate Patient Flow analytics	PASS
Prepare QA Checklist	COMPLETED
Prepare Dashboard Testing Report	COMPLETED

3. KPI Validation

The dashboard KPIs were checked against the underlying calculations and their displayed values. The following KPI areas were tested successfully.

KPI / Metric	Check Performed	Result
Total Admissions	Admission count checked against dashboard value	PASS
Total Revenue	Revenue aggregation checked	PASS
Average Occupancy	Average occupancy percentage checked	PASS
Average Length of Stay	Average stay value checked	PASS
Readmission Rate	Readmission calculation and filter response checked	PASS
Patients per Doctor	Calculation and department response checked	PASS

4. Filter and Interaction Testing

The dashboard filters were tested manually using different selections and then returned to the full-data view. The dashboard responded correctly during the checks.

Test	What was checked	Result
Department Filter	Changed department selection and verified dashboard updates	PASS
Admission Date Filter	Changed date range and verified affected values/charts	PASS
Chart Selection	Selected chart marks and checked linked dashboard response	PASS
Clear / All Selection	Cleared selections and confirmed normal dashboard view	PASS

5. Patient Flow Validation

The Patient Flow dashboard was tested for its main patient movement and admission-related analytics. Selections and available filters were checked to make sure the displayed analysis responded correctly.

Area Tested	Result
Patient admissions / flow analysis	PASS
Patient movement and discharge analysis	PASS
Patient type analysis	PASS
Readmission analysis	PASS
Readmission rate by department	PASS

6. Resource Utilization Validation

The Resource Utilization dashboard was checked for the main resource-related metrics and their response to dashboard selections.

Area Tested	Result
Bed utilization	PASS
Available / occupied bed analysis	PASS
Staff allocation	PASS
Patients per doctor	PASS
Department/resource interactions	PASS

7. QA Checklist

No.	Test Case	Status
1	Total Admissions KPI	PASS
2	Total Revenue KPI	PASS
3	Average Occupancy KPI	PASS
4	Average Length of Stay KPI	PASS
5	Department healthcare metrics	PASS
6	Department Filter	PASS
7	Admission Date Filter	PASS
8	Dashboard/chart interactions	PASS
9	Patient Flow analytics	PASS
10	Patient Flow interactions	PASS
11	Resource Utilization	PASS
12	Readmission analytics	PASS
13	Overall dashboard check	PASS

8. Testing Findings

All planned checks were completed successfully. The filters were added and tested, dashboard interactions responded as expected, and the main analytical sections were validated. No major dashboard issues were found during the final testing.

Based on the completed checks, the dashboard is considered ready for final submission.

9. Evaluation Result

Evaluation Criteria	Final Result
No major dashboard issues	PASS
KPI accuracy target above 95%	PASS
Filters tested successfully	PASS
Dashboard interactions tested successfully	PASS
Patient Flow validated	PASS
Resource Utilization validated	PASS

CONCLUSION

The MedTrack Healthcare Dashboard passed the Module 7 testing and validation checks. All required testing areas were completed successfully, with no major issues identified.
