

MedTrack_DV

Dashboard Testing Report

Module 7 – Testing & Validation

Project	MedTrack_DV
Internship	Infosys Springboard Virtual Internship 7.0
Testing Scope	Four integrated Tableau dashboards
Tools	Tableau Desktop Python Pandas NumPy
Prepared By	Isha Kumari
Final Test Status	PASS

1. Introduction

The MedTrack_DV dashboard testing phase was performed to verify the accuracy, functionality and usability of the four-dashboard Tableau solution developed for hospital operations and patient analytics.

2. Testing Objectives

- Validate healthcare KPI calculations.
- Verify patient-flow and department-level analytics.
- Test filters, navigation, tooltips and dashboard actions.
- Confirm consistency between Python calculations and Tableau results.
- Ensure the final Tableau workbook operates without major issues.

3. Dashboards Tested

- Hospital Overview – hospital KPIs, trends, department efficiency and insurance analysis.
- Patient Flow – admissions, discharges, patient movement, average stay and peak load.
- Department Analytics – department performance, readmission, capacity and efficiency comparison.
- Resource Utilization – bed utilization, occupancy, capacity and resource analysis.

4. Testing Methodology

Testing was performed through functional checks and data validation. Tableau KPIs were compared with Python-generated results, while each dashboard was tested for correct visualization behavior, filtering, navigation and interaction.

5. Test Execution Summary

Category	Test Cases	Passed	Failed
KPI Validation	6	6	0
Hospital Overview	7	7	0
Patient Flow	5	5	0
Department Analytics	5	5	0
Resource Utilization	4	4	0
Integration & Final Workbook	5	5	0
Overall	32	32	0

6. KPI Validation Result

All six required KPI areas were validated against the final Python calculations and Tableau implementations. The validation confirmed consistency of the final dashboard metrics.

- Total Admissions – Validated – PASS
- Average Length of Stay – Validated – PASS
- Occupancy Rate – Validated – PASS
- Readmission Rate – Validated – PASS
- Bed Utilization Rate – Validated – PASS
- Department Efficiency Score – Validated – PASS

7. Functional Testing Result

- Dashboard navigation – PASS
- Department and date filters – PASS
- Interactive tooltips – PASS
- Dashboard actions – PASS
- Charts and visualizations – PASS
- Final .twbx workbook opening and operation – PASS

8. Issues and Resolution

Issue	Observation	Resolution
Admission aggregation	Admission count initially reflected integrated rows rather than unique admissions.	Corrected the Tableau aggregation to use the appropriate Admission ID level.
KPI consistency	Small calculation differences were observed during development.	Validated the final Tableau calculated fields against Python results.
Filter scope	A department filter initially affected unintended worksheets.	Configured the filter scope to the intended worksheets.
Dashboard interaction	Some dashboard visualizations required adjustment during development.	Corrected worksheet configuration, aggregation and dashboard actions.

9. Final Result

All planned dashboard tests were completed successfully. The four dashboards were validated for KPI accuracy, visualization behavior, filtering, navigation and integration. No major unresolved issues remained after final testing.

10. Conclusion

The MedTrack_DV Tableau dashboard suite successfully meets the Module 7 testing and validation objectives. The final workbook provides validated, interactive dashboards for hospital overview, patient flow, department analytics and resource utilization.

11. Sign-off

Prepared By	Isha Kumari
Testing Status	PASS
Testing Date	12 August 2026
