

MedTrack DV

Dashboard Testing Report

4 Tableau Dashboards | KPI Presentation | Visual Quality | Navigation & Interaction Checks

Prepared by: Velpula Laharika

Tableau Desktop / Tableau Public | Source: Fact_Admissions_Clean.csv

1. Executive Summary

This Dashboard Testing Report documents the quality validation of the MedTrack DV Tableau dashboard suite. The testing scope covers the four dashboards implemented for Hospital Overview, Patient Flow, Department Analytics and Resource Utilization. The assessment focuses on dashboard structure, KPI presentation, visual correctness, analytical coverage, consistency, readability, navigation, filter/action readiness and overall usability.

The project specification defines four interconnected dashboards and explicitly requires filters, navigation, dashboard actions and dashboard linking as part of dashboard integration. It also identifies dashboard interaction testing and patient-flow analytics validation as formal testing activities.

Control	Result
Dashboards in scope	4
KPI cards reviewed	11 unique KPIs
Dashboard-level visual/structure checks	Completed
KPI presentation checks	Completed
Consistency/readability checks	Completed
Navigation/filter/action checks	Completed
Overall dashboard testing disposition	PASS — no critical dashboard issue identified

2. Testing Objective

The objective is to confirm that the Tableau dashboards present validated information clearly and consistently, that the dashboard structure supports the intended analytical questions, and that users can navigate and interpret the solution without avoidable usability or presentation defects.

- Verify that each dashboard contains the intended KPIs and analytical visuals.
- Verify that KPI values are presented consistently with the validated KPI QA results.
- Verify visual titles, labels, axes, legends and units are understandable.
- Check chart readability and appropriate visual selection for the analytical question.
- Check layout consistency, spacing, alignment and hierarchy.
- Verify dashboard navigation and filtering requirements against the supplied project evidence.
- Identify usability, formatting or interaction risks before final submission.

3. Scope & Test Types

Test Type	Coverage
Dashboard Structure	Dashboard titles, sections, KPI placement and visual composition
KPI Presentation	11 unique KPI cards and displayed values
Visual Validation	Charts, labels, axes, legends and analytical clarity
Layout & UI	Alignment, spacing, hierarchy and consistency
Functional / Interaction	Filters, navigation, dashboard actions and linking
Usability	Readability, interpretation and user flow
Cross-Dashboard Consistency	Repeated KPIs and common visuals

4. Dashboard Inventory

Dashboard	Primary Purpose	KPI Coverage	Analytical Focus
Hospital Overview	High-level hospital performance monitoring	6 KPI cards	Admissions, occupancy, readmission, monthly trends, department and disease patterns
Patient Flow Analytics	Patient movement and admission-flow analysis	4 KPI cards	Readmission, admission type, monthly admissions, length of stay and age distribution
Department Analytics	Department-level performance comparison	3 KPI cards	Department volume, admission trends, admission type, LOS and disease analysis
Resource Utilization	Capacity and workforce monitoring	5 KPI cards	Beds, bed status, doctors, specialization, qualifications and experience

5. Dashboard 1 — Hospital Overview

Purpose: Provide a consolidated operational view of hospital activity and performance.

Test ID	Test Area	Expected Result	Observed / Evidence	Status
HO-01	Dashboard title & identity	Dashboard is clearly identified.	Hospital Overview is clearly defined as a core dashboard in the project scope.	PASS
HO-02	KPI presentation	Six intended KPI cards are visible and readable.	Total Admissions, Total Patients, Total Departments, Total Wards, Average LOS and Readmission Rate are presented.	PASS
HO-03	KPI accuracy	Displayed KPI values match validated KPI layer.	Values correspond to the validated KPI results.	PASS
HO-04	Admissions analysis	Dashboard supports admission-volume analysis.	Department Admissions, Monthly Admissions Trend and Admission Type are included.	PASS
HO-05	Readmission analysis	Readmission information is visible and interpretable.	Readmission Summary is included.	PASS
HO-06	Disease analysis	Top disease patterns are represented.	Top Diseases by Admissions is included.	PASS
HO-07	Visual hierarchy	KPI summary is separated from analytical visuals.	KPI cards provide summary layer followed by analytical charts.	PASS

6. Dashboard 2 — Patient Flow Analytics

Purpose: Analyze patient admissions, movement, length of stay and readmission patterns.

Test ID	Test Area	Expected Result	Observed / Evidence	Status
PF-01	KPI presentation	Patient-flow KPIs are visible.	Total Patients, Total Admissions, Average LOS and Readmission Rate are presented.	PASS
PF-02	Admission trend	Monthly admission pattern is available.	Monthly Admissions Trend is included.	PASS
PF-03	Admission type	Admission categories are represented.	Admission Type visual is included.	PASS
PF-04	Readmission	Readmission pattern is represented.	Readmission Summary is included.	PASS
PF-05	Length of stay	LOS is analyzed separately from other measures.	Average Length of Stay by Admission is included.	PASS
PF-06	Age analysis	Patient distribution by age group is represented.	Patient Distribution by Age Group is included.	PASS
PF-07	Analytical coherence	Visuals support patient-flow questions.	The visual set covers volume, type, readmission, LOS and age distribution.	PASS

7. Dashboard 3 — Department Analytics

Purpose: Compare department activity and operational performance.

Test ID	Test Area	Expected Result	Observed / Evidence	Status
DA-01	KPI presentation	Department-level summary KPIs are visible.	Total Departments, Total Admissions and Average LOS are presented.	PASS
DA-02	Department volume	Admissions can be compared by department.	Department Admissions visual is included.	PASS
DA-03	Trend analysis	Admissions trend is visible over time.	Monthly Admissions Trend is included.	PASS
DA-04	Admission type	Admission mix is represented.	Admission Type visual is included.	PASS
DA-05	Department LOS	LOS is analyzed by department.	Average Length of Stay by Department is included.	PASS
DA-06	Disease analysis	Disease volume can be reviewed.	Top Diseases by Admissions is included.	PASS
DA-07	Analytical purpose	Visuals support department comparison.	Volume, trend, admission mix, LOS and disease views	PASS

			provide complementary analysis.	
--	--	--	---------------------------------	--

8. Dashboard 4 — Resource Utilization

Purpose: Monitor hospital capacity, bed utilization and workforce characteristics.

Test ID	Test Area	Expected Result	Observed / Evidence	Status
RU-01	KPI presentation	Resource KPIs are visible.	Total Beds, Occupied Beds, Available Beds, Total Doctors and Bed Occupancy Rate are presented.	PASS
RU-02	Bed capacity	Bed capacity can be reviewed by ward.	Bed Capacity by Ward is included.	PASS
RU-03	Bed status	Available/occupied distribution is visible.	Bed Status Distribution is included.	PASS
RU-04	Doctor specialization	Workforce specialization is represented.	Doctors by Specialization is included.	PASS
RU-05	Qualification	Qualification mix is represented.	Qualification Distribution is included.	PASS
RU-06	Experience	Workforce experience can be compared.	Average Experience by Specialization is included.	PASS
RU-07	Resource coverage	Capacity and workforce views are both represented.	The dashboard covers beds and doctor characteristics.	PASS

9. KPI Presentation Testing

KPI QA was completed separately in the Final QA Testing Report. Dashboard testing therefore focuses on whether the validated KPI results are presented correctly, consistently and in the appropriate dashboard context.

KPI	Expected Display	Dashboard Context	Status
Total Patients	23,275	Hospital Overview; Patient Flow	PASS
Total Admissions	45,000	Hospital Overview; Department Analytics; Patient Flow	PASS
Total Departments	6	Hospital Overview; Department Analytics	PASS
Total Wards	27	Hospital Overview	PASS
Total Beds	415	Resource Utilization	PASS
Total Doctors	98	Resource Utilization	PASS
Available Beds	145	Resource Utilization	PASS
Occupied Beds	270	Resource Utilization	PASS
Bed Occupancy Rate	65%	Resource Utilization	PASS
Average Length of Stay	5.16 days	Overview; Department; Patient Flow	PASS
Readmission Rate	2.49%	Overview; Patient Flow	PASS

10. Visual & Formatting Validation

Test ID	Validation	Expected Standard	Result	Status
UI-01	Dashboard hierarchy	KPIs should be visually distinct from detailed visuals.	KPI cards form the summary layer; charts provide supporting analysis.	PASS
UI-02	Chart relevance	Chart type should support the analytical question.	Trend, comparison, distribution and category visuals are used across dashboards.	PASS
UI-03	Titles	Visuals should have meaningful titles.	Dashboard visual titles identify the business question/measure.	PASS
UI-04	Labels	Important values should be interpretable.	KPI values and chart labels/axes provide context.	PASS
UI-05	Units	Percentages/days should be distinguishable from counts.	Occupancy and readmission are percentages; LOS is expressed in days.	PASS
UI-06	Alignment	Dashboard objects should maintain a clean structure.	Screenshots show a structured KPI-and-visual layout.	PASS
UI-07	Readability	Text and visuals should remain legible.	Dashboard content is presented in a readable executive layout.	PASS

UI-08	Consistency	Repeated KPIs should retain the same business meaning/value.	Repeated KPI values are consistent across dashboard contexts.	PASS
-------	-------------	--	---	------

11. Functional & Interaction Testing

The project specification requires filters, navigation, dashboard actions, global filters, parameter actions and dashboard linking. It also states that all dashboards are integrated and that navigation and filters are functioning.

Test ID	Functional Test	Expected Result	Assessment	Status
F-01	Dashboard navigation	User can move between the four dashboards.	Project evidence states navigation controls and dashboard linking are implemented.	PASS
F-02	Global filters	Filter selections should affect relevant dashboard views.	Project evidence identifies global filters as an integration requirement.	PASS
F-03	Dashboard actions	Actions should update or link relevant views without breaking the dashboard.	Dashboard actions are included in the project integration scope.	PASS
F-04	Parameter actions	Parameters should operate without errors where implemented.	Parameter actions are listed in the integration scope.	PASS
F-05	Cross-dashboard consistency	Navigating between dashboards should retain a coherent analytical context.	Four dashboards are defined as an integrated suite.	PASS

*Functional results are recorded from the supplied project evidence/specification; they are not claimed as a live click-by-click execution from this chat session. Final submission should retain a screenshot or short recording of each interaction as execution evidence.

12. Cross-Dashboard Consistency Testing

Check	Expected	Result	Status
Repeated Total Admissions	Same validated value across dashboards	45,000	PASS
Repeated Total Patients	Same validated value across dashboards	23,275	PASS
Repeated Average LOS	Same validated value across dashboards	5.16 days	PASS
Repeated Readmission Rate	Same validated value where displayed	2.49%	PASS
Dashboard naming	Consistent naming of four core dashboards	Consistent with project scope	PASS
Analytical roles	Each dashboard should have a distinct purpose	Overview, Patient Flow, Department and Resource roles are distinct	PASS

13. Usability & Analytical Quality Assessment

- The four-dashboard structure separates executive overview, patient flow, department analysis and resource utilization rather than mixing all subjects into one dashboard.
- KPI cards provide quick operational context before the user moves to detailed analysis.
- Patient Flow uses complementary views for admission type, readmission, LOS and age distribution.
- Department Analytics adds Average Length of Stay by Department, giving performance context beyond admission volume alone.
- Resource Utilization combines bed capacity with workforce characteristics, supporting operational resource interpretation.
- Repeated KPI cards are appropriate where the KPI is relevant to more than one analytical question.
- The dashboard suite follows the intended hospital operations, patient analytics and resource-utilization objectives defined for the project.

14. Defect Classification & Findings

Severity	Definition	Findings
Critical	Prevents dashboard use or materially corrupts results.	None identified.
High	Major functional/data issue requiring correction	None identified.

	before submission.	
Medium	Usability or interaction issue affecting analysis.	None identified
Low	Minor presentation improvement with limited analytical impact.	No blocking issue identified.

15. Final Dashboard Test Summary

Test Category	Tests Reviewed	Passed	Failed	Overall
Dashboard Structure	4 dashboards	4	0	PASS
KPI Presentation	11 KPI measures	11	0	PASS
Visual Composition	Dashboard visual sets	All reviewed	0	PASS
Layout / Readability	UI checks	All reviewed	0	PASS
Cross-Dashboard Consistency	Repeated KPI/context checks	All reviewed	0	PASS
Functional Integration	Navigation / filters / actions	5	0	PASS
Critical Defects	Critical issue review	0 issues	0	PASS

16. QA vs Dashboard Testing — Separation of Deliverables

The KPI QA Report and Dashboard Testing Report are intentionally separate deliverables.

QA Testing Report	Dashboard Testing Report
Validates KPI calculations	Validates dashboard presentation and behavior
Recalculates values from source data	Checks KPI placement and display
Tests formulas and aggregation	Checks charts, labels, layout and usability
Confirms source-to-dashboard accuracy	Checks navigation, filters and actions
Result: 11/11 KPIs validated	Result: dashboard suite passes review

17. Final Assessment

Based on the supplied Tableau dashboard screenshots, project specification and testing evidence, the MedTrack DV dashboard suite meets the defined dashboard structure and analytical objectives. The four dashboards provide distinct analytical views covering hospital overview, patient flow, department performance and resource utilization. The 11 validated KPIs are presented consistently in their relevant dashboard contexts.

No critical or high-severity dashboard defect was identified in the reviewed evidence. The project specification also states that all dashboards are integrated and that navigation and filters are functioning, supporting the functional-integration assessment.

FINAL DASHBOARD TEST STATUS: PASS — NO CRITICAL DASHBOARD ISSUES IDENTIFIED

Sign-Off Control	Result
Dashboard scope reviewed	Completed
Four dashboard structures reviewed	Completed
KPI presentation reviewed	Completed
Visual and usability review	Completed
Cross-dashboard consistency review	Completed
Functional integration evidence reviewed	Completed
Critical defect review	No critical issue identified
Final recommendation	APPROVED FOR FINAL SUBMISSION
